Who We Are:

Orca IoT is a construction services company that uses imaging, GPS, and facial recognition to increase transparency, eliminate fraud, and save money.

Orca IoT products directly result in reducing jobsite waste, expediting project completion, and enhancing data driven decision making.

How We're Different:

- High resolution, high quality, not high cost
- No hardware to own, just pay a low monthly fee
- Cellular connected & cloud powered
- Worker Activity tracking using AI and the Orca Atlas
- Easy to use, fully managed, web based platform

ORCA IOT

High Tech, Not High Cost

High Tech not High Cost

The best technologies, you barely even notice. Orca IoT was born in the cloud and we handle the high tech for you.

We use high resolution sensors, high quality lenses, and manufacture and assemble our proprietary hardware right here in America.

We were born in the cloud, run a tight ship, and we pass these savings on to you.

Cellular Connected. Cloud Powered.

All you have to do is mount it, plug it in, and you're taking pictures. It's that simple. We have cellular connectivity built into every one. No hard IT conversations, no network to build.

The Orca Platform is secure and reliable. Your jobsite photos will be stored, organized, and easily viewable from anywhere.

Jobsite Activity Tracking

Our cameras do more than just take pretty photos. We use AI and ML to track activity on the jobsite. Couple that with the Orca Atlas and now you have a full solution using facial recognition, GPS, cellular location data, and images. The best part is, these are all standard features.

More insight. More value.

Stop Buying Cameras

You never have to worry about buying an Orca Cam, you only pay for the service during your project. When you're done just ship it back and we'll send you a new one for your next job.

Less hassle at a great price.
